

20 Way Controller

The 20 way controller is a 19" rack mounting enclosure of similar construction to the 4 way module. The front panel is fitted with 20 direction selector switches, each with adjacent LEDs, and a master Go button. A key switch selector and 3 pin xlr socket allow a remote Go button to be used. The controller is connected to the distro modules using five flying leads fitted to the front panel, one for each module.
