

CARABINERS: TECHNICAL INFORMATION

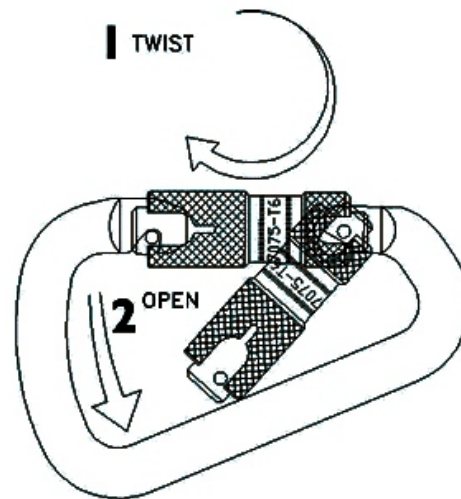

SCREWGATE

This classic double-action gate mechanism is suitable for many different attachment situations.

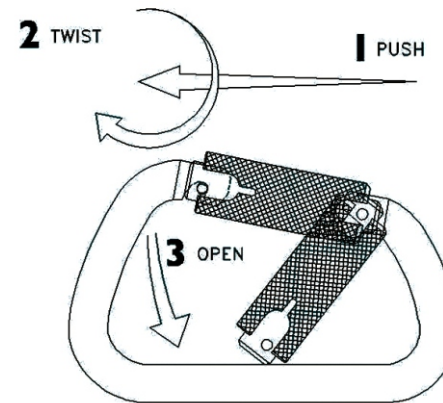

KWIKLOCK

The Kwiklock automatic locking system is the fastest gate locking mechanism to operate. It also provides a convenient solution to eliminating the chance that the gate will accidentally be left unlocked.

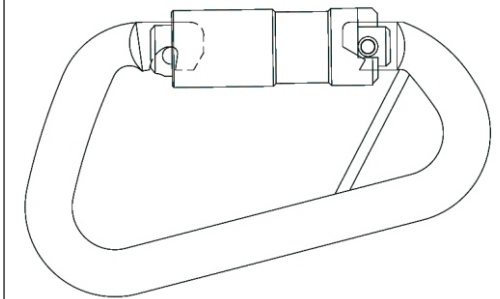

LOCKSAFE

The triple action of the innovative Locksafe mechanism significantly reduces the chance of accidental gate opening and is a major step forward in improving the safety of automatic locking carabiners.

CAPTIVE BAR

Most carabiners can be provided with the captive bar option for EN362:2004/T use. This ensures directional orientation and loading of the carabiner along its major axis where required.
