

In 2011 Harrogate's purpose-built International Centre completed a major project to create a 20% increase in capacity. Two new halls offer an extra 3,100m² of exhibition space, as well as providing the town with significant additional space for evening events.

Unusual Rigging was contracted to design, manufacture and install a 1550 sq m modular Tension Wire Grid in Hall H.

- 36 custom designed and built panels, 25 of which are 8m x 7m, the remainder being angled to accommodate the shape of the hall
- 2.5kN per square metre load capacity
- Deflection of no more than 50mm
- 70mm pitch
- 55,000m of 4mm stainless steel wire rope manufactured into 7337 individual ropes
- Grid is 7m above floor level, with 2.5m head height.

Client:
Wates Construction

Scope:
1550 sq m modular Tension Wire Grid
